

SUMMER ASSIGNMENT FOR NEUROBIOLOGY (YEAH!!)

I am really looking forward to seeing all of you in Neurobiology next year. We will be studying all different aspects of the brain and nervous system. We will even look at different diseases of the nervous system. In order to get ready for this subject, which is constantly changing due to new research coming up every day.... You need to do some research. Your job is to watch the magazines, newspapers and perhaps even the internet for articles about the brain and nervous system advances. You may only use **TWO** articles from the internet. You need to have a total of **TEN** articles!!

Don't think this is impossible as even the Express News has articles two or three a day.

Look for any brain stuff—diseases, ADHD, dyslexia, Parkinson's, Huntington's, psychological disorders, sleep patterns, MRI and PET scans of the brain, stress, strokes, serotonin, acetylcholine, memory, learning... The list goes on...and on... and on...

Some websites you could look at are:

Neuroscience for kids

Society for Neuroscience

UTSA→Sciences→Life Sciences→Teacher Summer Institute→Past Institutes→

On line Activities

ENJOY YOUR SUMMER AND USE YOUR BRAIN!
